IN THE CLAIMS

List of Claims:

8. (Currently Amended) The method of claim 1, wherein:
the device comprises a host processor ~~capable of~~ **for** executing a driver ~~capable~~
15 ~~of~~ **for** accessing the data while the device is operating in the another mode of operation.
9. (Currently Amended) An apparatus comprising:
circuitry ~~capable of~~ **for** storing in a RAID system, if a change in configuration of
the RAID system occurs during ~~one~~ a suspend mode of operation of a device coupled to
20 the RAID system, data indicative, at least in part, of resulting configuration of the RAID
system resulting after the change, the device having a relatively lower power
consumption rate while the device is operating in the suspend mode of operation

Art Unit: 2115

compared to a relatively higher power consumption rate while the device is operating in another mode of operation.

10. (Currently Amended) The apparatus of claim 9, wherein:

5 the circuitry is also ~~capable of~~ for, in response, at least in part, to a request to operate in the another mode of operation, storing, at least in part, based at least in part upon the data, other data indicative at least in part of the resulting configuration of the RAID system; and

10 the circuitry is also ~~capable of~~ for executing, based at least in part upon the other data, one or more operations involving, at least in part, the RAID system.

12. (Currently Amended) The apparatus of claim 9, wherein:

15 the circuitry is also ~~capable of~~ for, while the device is operating in the suspend mode of operation, preventing execution of one or more pending operations involving, at least in part, the RAID system.

15. (Currently Amended) The apparatus of claim 14, wherein:

20 the circuitry is also ~~capable of~~ for, in response, at least in part, to a request to operate in the suspend mode of operation, storing information indicating, at least in part, status of one or more processes being executed, at least in part, by the device.

16. (Currently Amended) The apparatus of claim 9, wherein:

the RAID system comprises a redundant array of inexpensive disks; and

the device comprises a host processor ~~capable of~~ for executing a driver ~~capable of~~ for accessing the data while the device is operating in the another mode of operation.

5 24. (Currently Amended) The article of claim 17, wherein:

the device comprises a host processor ~~capable of~~ for executing a driver ~~capable of~~ for accessing the data while the device is operating in the another mode of operation.

25. (Currently Amended) A system comprising:

10 a circuit board comprising read only memory (ROM) to store instructions; and
circuitry ~~capable of~~ for executing the instructions, execution of the instructions by
the circuitry resulting in:

if a change in configuration of a RAID system occurs during a suspend mode of
operation of a device coupled to the RAID system, storing, in the RAID system, data
15 indicative, at least in part, of resulting configuration of the RAID system resulting after
the change, the device having a relatively lower power consumption rate while the
device is operating in the suspend mode of operation compared to a relatively higher
power consumption rate while the device is operating in another mode of operation.

20 26. The system of claim 25, wherein:

the circuitry comprises a processor; and

a circuit board also comprises one or more integrated circuits coupled to the processor and ~~capable of~~ for being coupled to the storage.

Pursuant to MPEP 606.01, the title has been changed to read:

5 -- SYSTEM FOR STORING DATA WITHIN A RAID SYSTEM INDICATING A CHANGE
IN CONFIGURATION DURING A SUSPEND MODE OF A DEVICE CONNECTED TO
THE RAID SYSTEM--
